Ventilation profile

It might be indicated to use perforated screen or mesh to close off the cavity at the ventilation gaps to keep out vermin and rodents.

Perforated screen angle

Swisspearl perforated aluminium screen angle is available 0.7 mm thick blank and in panel colors.

Perforated ratio is about 50 %. The perforated screen angle is sufficiently solid to prevent ingress of rodents, so the use at ground level is indicated. Where prominently visible, e. g. at window head, the use of color matched screen angle is indicated for aesthetical reasons.

Mesh

It is possible to locally procure aluminium mesh. It has a high ventilation ratio, thin material thickness (no push out of panel) and is easy to install.

The use of screen or mesh is not compulsory. In a properly designed cavity there is for most time an air draft prevailing, which is not attractive for the presence of insects.
