

## Torr ridge Way

Client: Mi-Space/C&P Plastering • System: Wall System 2 • Material: Mineral Wool, Granomin  
Sector: High Rise, Residential • Build Type: Refurbishment

SPSEnvirowall's Wall System 2 with 100mm mineral wool delivers a dramatic refurbishment for a regeneration scheme, a low-rise estate formed of a large three-storey apartment block providing accommodation for Plymouth Community Homes.

Utilising 1,000m<sup>2</sup> of SPSEnvirowall 100mm mineral wool, the thermal performance of the building on Torr ridge Way has been vastly improved with a u-value of 0.28W/m<sup>2</sup>K and residents can now benefit from lower energy bills.

SPSEnvirowall's External Wall Insulation (EWI) was specified for Plymouth Community Homes' dramatic refurbishment of a block of flats on Torr ridge Way, Plymouth. The low-rise block of flats is a three-storey building providing homes for the client.

The aesthetics of the building have changed for the better with the application of SPSEnvirowall's white Granomin finish which has provided a modern and updated appearance to the properties. Now the external walls of the building have a bright, welcoming façade which replaces the original and tired looking 'brickwork'.

The Wall System 2 range of systems is designed to provide cost effective robust external wall insulation systems ideally suited for the refurbishment of social housing.
